

Abstract of the Disclosure

The invention relates to a holder for attaching a lighter to the narrow face of a cigarette packet. The holder includes two spring lugs, overlapping the cigarette packet in the area of said narrow face on a front side and a rear side. At least one spring lug has a ridge-type stop element on an inner side, facing the other spring lug, said element extending at least over a partial length of the spring lug and parallel or approximately parallel to the lighter axis.
